

POLYPHARMACY

Are medications making your mouth dry?

If you are taking medications, and especially if you are taking several, you may be suffering from dry mouth as a result. More than 1,000 medications can cause dry mouth, including many common drugs for conditions including blood pressure, allergies, heart disease and depression.

Dry mouth (xerostomia) means there is less saliva in your mouth for natural protection of your teeth. This lack of saliva increases your chances of having tooth decay and cavities, and can also result in tooth sensitivity. It's important to replenish the minerals in your mouth that you would otherwise get from saliva.

MI Paste™ / MI Paste Plus™

- Helps relieve dry mouth by restoring a "normal feeling" of saliva lubrication
- Helps strengthen teeth against tooth decay
- Helps restore minerals (calcium and phosphate) that help strengthen your teeth
- Helps soothe sensitivity

MI Paste Plus™ contains 900ppm fluoride (almost same amount as regular fluoride toothpaste). MI Paste™ does **not** contain fluoride.

MI Paste Plus™

SKU #690511

Saliva is your body's natural oral defense system, delivering important minerals to your teeth to keep them strong and healthy. If you have dry mouth because of taking medications, you can suffer a mineral imbalance because of insufficient saliva. MI Paste™ / MI Paste Plus™ protects against tooth decay and cavities, and also relieves dry mouth sensitivity.

Easy At-Home Application

MI Paste Plus is recommended for patients age six and older.

Use regular MI Paste for patients under the age of six and for expectant mothers.

Squeeze a small amount onto finger.

Apply to teeth using finger to spread over all tooth surfaces.

Leave for at least 3-5 minutes. Expectorate (spit) but do not rinse. Leave the excess to slowly dissolve.
